Summary

Purpose of report

The Solvency II regulations came into effect on 1 January 2016 and require new reporting and public disclosure arrangements to be implemented by insurance companies within the European Union. This document is the second version of the Solvency & Financial Condition Report (“SFCR”) that is required to be submitted to the Commissariat aux Assurances (“CAA”) by the group, which comprises Colonnade Insurance S.A. (“the Company”) and its subsidiary, TIG (Bermuda) Ltd. (“TIG Bermuda” and together “the Group”).

A. Business and Performance

As TIG Bermuda has not written any (re)insurance business for the last number of years, this section summarises how the Company operates and how it has performed during the year ended 31 December 2017. The Company’s financial year runs to 31 December and it reports its results in Euro.

B. System of Governance

Given the nature of TIG Bermuda (as described in section A.1), the system of governance described relates to that in place within the Company. The Company maintains a strong framework for the control and management of the business. This section describes the key committees and functions which serve to provide sound and prudent management of our operations.

C. Risk profile

This section provides information regarding our risk management processes, for each of the principal risks faced by the Group.

D. Valuation for solvency purposes

The Solvency II regulations require the Group to value assets and liabilities on a different basis to that used in the Company’s financial statements when assessing its solvency requirements. This section describes the main methods and assumptions used in the valuation.

E. Capital management

The Group holds capital in excess of its regulatory requirements, to maintain its ability to pay its policyholders even if extreme events materialise. In order to assess its regulatory Solvency Capital Requirement, the Company uses the standard formula specified in the Solvency II legislation. This section summarises the assets held to meet the regulatory Solvency Capital requirement.

A. Business and Performance

A.1 Business

i. Business profile

Colonnade Insurance S.A. (“Colonnade” or “the Company”) is a Luxembourg insurer which is authorised to write all classes of non-life insurance business with the exception of class 10 (motor vehicle liability). Colonnade underwrites consumer and commercial business lines through branches established in Hungary, Czech Republic, Slovakia, Bulgaria, Poland and Romania.

The Company’s shareholder is **Fairfax Luxembourg Holdings S.à.r.l.**, a company registered in Luxembourg.

The Company’s ultimate parent is **Fairfax Financial Holdings Limited (“Fairfax”)**, a major Canadian holding company whose common shares are listed on the Toronto Stock Exchange, and whose address is 95 Wellington Street West, Suite 800, Toronto, Ontario M5J 2N7, Canada. Further details regarding Fairfax are set out within the section entitled “About Fairfax” overleaf.

TIG (Bermuda) Ltd. (“TIG Bermuda”) is an insurance company authorised in Bermuda which has not written any new or renewing insurance business for at least the last 7 years. At 31 December 2017, its net assets comprise a cash / investment portfolio of approximately EUR 1 million (with accruals of an immaterial value and nil technical liabilities). The Company’s 100% ownership share of TIG Bermuda represents its only direct or indirect participating interest.

ii. Business Strategy

Through the underwriting capabilities which exist in its branches, Colonnade intends to develop an insurance brand characterised by underwriting excellence, innovative insurance solutions and products and superior client service. Colonnade’s ambition is to be recognised as a leading and reliable partner ready to address the requirements of the Central and Eastern European (“CEE”) insurance market.

Colonnade underwrites a traditional non-life insurance portfolio with an offering which includes commercial property, liability, home owners, personal accident, travel insurance and auxiliary consumer products as well as guaranteed auto protection insurance. Colonnade is targeting customers in both the commercial and personal insurance segments across the CEE region and, opportunistically, Colonnade is ready to support their insurance demands abroad.

Colonnade aims to grow commercial and consumer insurance focusing on profitable accounts where market conditions support its underwriting risk appetite. Through a carefully designed reinsurance structure, Colonnade will protect its net exposures to natural catastrophes, single risk events or frequency trends and Colonnade will protect its reinsurers’ interests through strong underwriting controls and best practices applied in all countries.

The acquisition of the renewal rights and the teams of employees of **AIG’s** businesses in CEE during 2017 (as described in the “Significant business events during 2017” section overleaf) has provided Colonnade with a unique opportunity to acquire a well underwritten, profitable portfolio with a good balance of retail and commercial risks as well as expanding its footprint in the CEE region by adding a direct writing presence in Bulgaria, Romania and Poland.

Colonnade’s business objectives can be summarised as follows:

- Our focus is on property and casualty insurance business in Central and Eastern Europe.
- We are committed to underwriting profitability in all countries with an emphasis on long term growth and relationships rather than short term earnings.

- We will opportunistically expand premium volume when market conditions allow and reduce premiums (significantly if necessary) should markets conditions dictate.
- We always want to be soundly capitalised.

iii. Significant business events during 2017

A.M. Best rating

In November 2017, A.M. Best assigned a Financial Strength Rating (FSR) of A- (Excellent) and a Long-Term Issuer Credit Rating (Long-Term ICR) of "a-" to Colonnade.

Acquisition of the business and renewal rights to *AIG's businesses in Hungary, Czech Republic, Slovakia, Bulgaria, Poland and Romania*

During 2017, Colonnade completed the acquisition of the business and renewal rights of the non-life insurance operations of AIG in Hungary, Czech Republic and Slovakia (effective from 30 April 2017), Bulgaria (effective from 31 May 2017), Poland (effective from 30 June 2017) and Romania (effective 31 October 2017). As part of the transaction, Colonnade also assumed AIG's operating assets and employees in these territories.

Part VII transfer of business written by QBE operations in Hungary, Czech Republic and Slovakia

Colonnade also includes the business and renewal rights of the non-life insurance operations acquired from QBE in Hungary, Czech Republic and Slovakia (effective from 1 February 2016, 1 April 2016 and 2 May 2016 respectively).

On 31 July 2017 ("the effective date") a Part VII transfer pursuant to the U.K. Financial Services and Markets Act 2000 was completed to legally transfer the run-off of the business written by QBE's insurance operations in Hungary, Czech Republic and Slovakia prior to the effective date ("the transferring business") from QBE to Colonnade. The net liabilities relating to the transferring business have been fully reinsured by Polish Re (a wholly owned Fairfax subsidiary) since 31 December 2014 through various 100% quota share transactions with QBE. All reinsurance protection that benefited the transferring business was transferred from QBE to Colonnade at the effective date.

iv. Capital and solvency cover

In order to maintain solvency levels whilst writing the AIG business, a schedule of proposed capital injections during 2017 and 2018 was established. Consistent with the schedule, the Company received capital injections of EUR 46 million during 2017 with a further EUR 3 million received during the first quarter of 2018. **The Group's SCR (standard formula) cover ratio stood at 175% at 31 December 2017.**

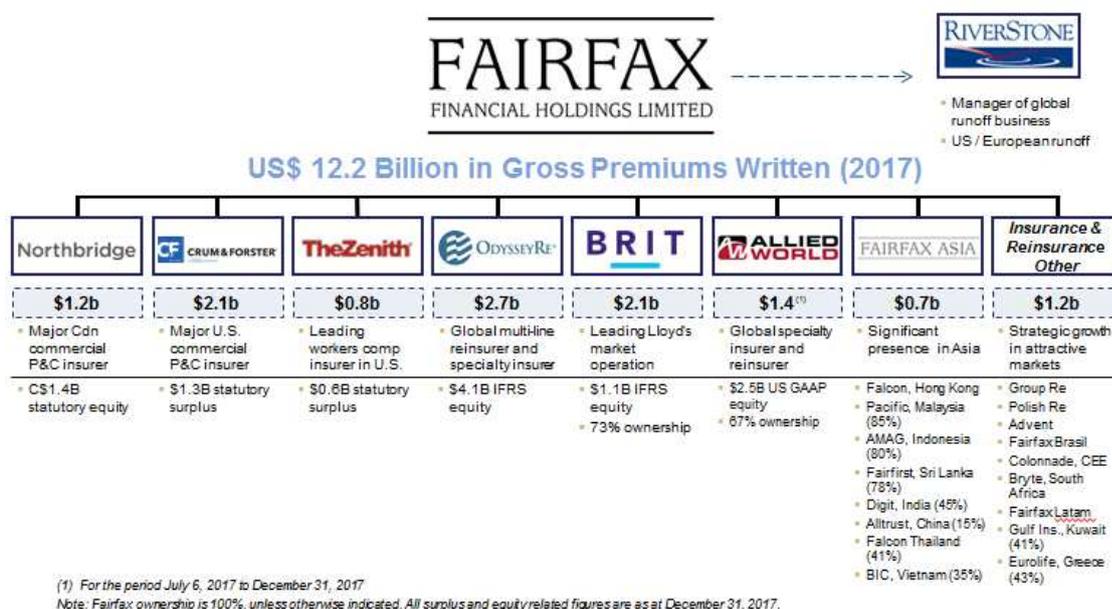

v. About Fairfax

Fairfax, through its subsidiaries, has an international insurance and reinsurance business which has a global underwriting reach with longstanding relationships and a broad product range. At each of its subsidiaries there is an experienced management team focused on underwriting discipline and prudent reserving. Management at these companies are committed to Fairfax's goals of underwriting profitability.

Fairfax (<http://www.fairfax.ca/>) is described in summary detail below:

- Significant player in the P&C industry with US\$12.2 billion in gross premium, US\$12.5 billion in equity capital and over 13,000 employees (as at 31 December 2017).
- Strong long-term relationships developed over 32 years and multiple cycles.
- Global territorial reach in both insurance and reinsurance - underwriting offices in over 40 countries.
- Over 200 discrete underwriting profit centers through our network of companies.
- Developed footprint in emerging markets (India, China, MENA, South America, CEE and South-East Asia).
- Fairfax culture is well known and respected within the industry.

Fairfax's diversified operating platform is illustrated below:

vi. Summary Financial Performance

The Group's summary income statement for the years ended 31 December 2017 and 2016 is set out below:

Income Statement (EUR'000)	2017	2016
Gross Written Premium	105,991	16,721
Net Earned Premium	46,730	7,516
Claims Incurred	(20,695)	(2,976)
Net operating expenses	(40,858)	(13,478)
Underwriting result	(14,822)	(8,938)
Other income and charges	383	(340)
Loss before tax	(14,439)	(9,278)
Taxes	(558)	(80)
Loss for the financial period	(14,997)	(9,358)

In 2017, Colonnade remained in the start-up phase of its operations and, accordingly, its operating expense ratio was elevated which, in turn, adversely impacted the underwriting result recorded. However, in future years, this will normalise as the business portfolio and earned premium base increases in scale.

The acquisition of the business and renewal rights of AIG's insurance operations in Central and Eastern Europe over the course of 2017 materially influenced premiums written and earned, claims incurred and operating expenses recorded during the financial year ended 31 December 2017. Further growth is expected in 2018 as the Company completes a full policy renewal cycle.

A.2 Underwriting Performance

Colonnade currently underwrites business through six branches established across the CEE region; three of which, being the branches in Hungary, the Czech Republic and Slovakia, commenced underwriting activities during 2016; with underwriting activities commencing in newly created branches in Bulgaria, Poland and Romania on 1 June, 1 July and 1 November 2017 respectively.

During 2017, Colonnade wrote total gross premiums of EUR 106 million (across the six branches).

A.3 Investment Performance

i. Investment Performance

As at 31 December 2017, the Company's investment portfolio was held entirely in cash (circa EUR 80.2 million), as was the case throughout the entire year. Reflecting the prevailing low interest rate environment, the investment return recorded during the period was not significant.

A.4 Performance of other activities

There are no other activities to disclose.

A.5 Other information

i. Guarantee from Fairfax

The Company benefits from a guarantee provided to it by Fairfax, under which it guarantees the performance of all (re)insurance business written by the Company. Under the terms of this agreement, Fairfax undertakes to pay all valid claims in the event of insolvency of the Company. The agreement remains in force until and automatically terminates on 31 December 2018 (unless renewed or extended by Fairfax) and covers all policies issued or renewed prior to the date of termination of the agreement.

ii. Supervisory Authority

The Company is regulated in Luxembourg by the Commissariat aux Assurances ("CAA") whose address is 7, boulevard Joseph II, L-1840 Luxembourg. TIG Bermuda is regulated by the Bermuda Monetary Authority ("BMA") whose address is BMA House, 43 Victoria Street, Hamilton HM12, Bermuda.

iii. Auditor

The Company's auditor is PwC whose address is 2 Rue Gerhard Mercator, 2182 Luxembourg.

iv. Employees

The number of staff employed across the Company's operations was 430 at 31 December 2017.

v. Head office address

The Company's head office address is 1, rue Jean Piret, L-2350 Luxembourg, Grand Duchy of Luxembourg. TIG Bermuda's registered office is Canon's Court, 22 Victoria Street, Hamilton HM EX Bermuda.

B. System of Governance

B.1 General information on the system of governance

i. Introduction

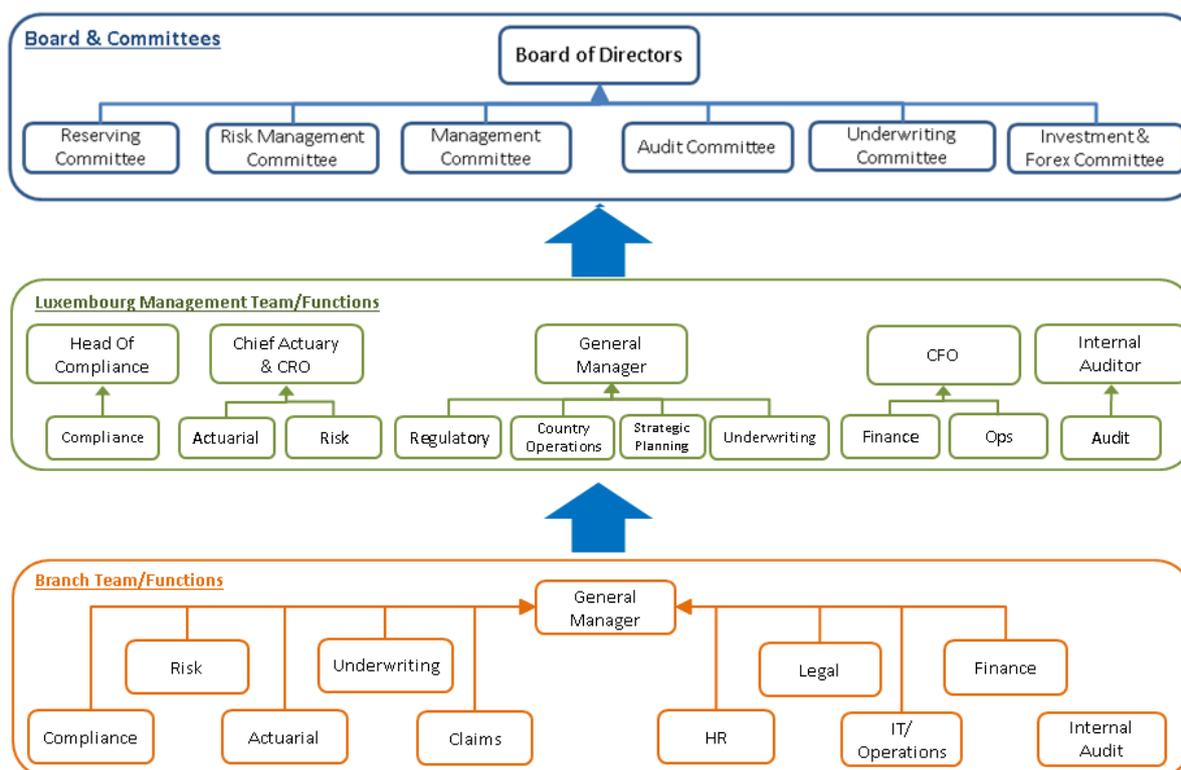

Given the nature of TIG Bermuda (as described in section A.1), the system of governance described within section B relates to that in place within Colonnade Insurance S.A. (the “Company”).

The Company has implemented a system of governance which provides for sound and prudent management. Risk management, compliance, internal audit and actuarial functions which are consistent with the needs of Company’s operations have been established. The Company’s staff and directors have the skills, knowledge and expertise to fulfil their allocated responsibilities. The system of governance is therefore considered proportionate to the nature, scale and complexity of the Company’s business.

ii. Management and Governance Structure

The Company has a Board of Directors and, currently, six board committees being the Reserving Committee, Risk Management Committee, Management Committee, Underwriting Committee, Investment & Foreign Exchange Committee as well as an Audit Committee.

The following diagram summarises the Company’s governance structure.

The Board of Directors currently comprises six Directors: an executive Chairman, two executive Directors and three independent non–executive Directors.

The Board of Directors are:

- Mr. Ronald Schokking (Chairman)
- Mr. Frederick Gabriel (Independent)
- Mr. Marnix Wielenga (Independent)
- Mr. Leo de Waal (Independent)
- Mr. Jean Cloutier
- Mr. Bijan Khosrowshahi

The independent, non-executive Directors do not have any executive relationship with the wider Fairfax group. They bring a wide range of experience and expertise from both the insurance and general business sectors.

The responsibilities of the Board, and its committees, are set out below:

- The **Board of Directors** has ultimate responsibility for the oversight of the business, senior management and setting the strategy and risk appetite. The Board is responsible for ensuring the maintenance of a sound system of internal control and risk management and for the approval of any changes to the capital, corporate and/or management structure of the Company.
- The **Reserving Committee** oversees the setting of the Company's reserves, liaising closely with the Company's actuarial function.
- The **Risk Management Committee's** role is to ensure the development and implementation of the Company's Enterprise Risk Management Framework, to ensure that appropriate procedures are in place to identify, assess and manage risk from a strategic and operational perspective and to monitor implementation of risk management procedures.
- The objective of the **Management Committee** is to take decisions, or to establish the basis on which all decisions are taken, required to execute the strategy determined by the Board, including all major operational decisions.
- The responsibilities of the **Audit Committee** includes monitoring the Company's financial reporting process; monitoring the effectiveness of the Company's systems of internal control, internal audit and risk management; monitoring the statutory audit of the statutory financial statements; and reviewing and monitoring of the independence of the statutory auditors.
- The **Underwriting Committee** oversees the development of and adherence to the Company's Underwriting Policy, including setting protocols for underwriting authorities, guidelines and rate monitoring.
- The **Investment & Foreign Exchange Committee** oversees the management of the Company's investment portfolio by Hamblin Watsa (a Fairfax company), ensuring compliance with the investment guidelines established by the Board.

On a quarterly basis, the Management Committee physically meets at one of the branch locations to review the Company's performance and operations. These meetings are chaired by the General Manager.

iii. Remuneration

The Company's remuneration structures are designed to motivate delivery of the Company's key business strategies, create a strong performance-orientated environment and reward achievement of meaningful targets over the short- and long-term.

Variable elements of executive remuneration (such as discretionary bonuses) packages are subject to a maximum percentage of their fixed annual salary. Further, variable elements of remuneration for staff within controls functions (such as actuarial, risk, compliance and internal audit) are determined independently from the performance of the operational units and areas that are subject to oversight by these functions.

iv. Material transactions during the period

The Company received capital injections amounting to EUR 46 million from its immediate parent during 2017. There were no further material transactions during 2017 between the Company and its immediate and ultimate parent companies, the Board members or management.

B.2 Fit and proper requirements

The Company has adopted a Fitness and Probity policy to ensure that individuals who effectively run the Company or otherwise exercise control functions have adequate qualifications, knowledge and experience to enable sound and prudent management (fit) and are of good repute and integrity (proper).

The Directors, senior managers and those exercising control functions must meet the following criteria, amongst others, to be deemed fit and proper:

- Possess appropriate experience, educational or professional qualifications;
- Display a high degree of competency in current and previous roles;
- Demonstrate at all times good integrity, honesty and sound ethical character;

The ongoing assurance of fitness and propriety of the Directors and senior managers is re-assessed annually. A register of all persons falling within the Fit and Proper regime is maintained by the Compliance function.

B.3 Risk management system including the own risk and solvency assessment

i. Risk Management Philosophy

Fairfax is the indirect 100% shareholder and ultimate capital provider to the Company. Fairfax expects its operating divisions, of which Colonnade is one, to act in an autonomous de-centralised way within the guiding principles (the "Guiding Principles") established by the Fairfax group.

Colonnade's corporate risk strategy is, therefore, set in the context of certain elements of the Guiding Principles:

- We always look at opportunities but emphasize downside protection and look for ways to minimize loss of capital.
- We are entrepreneurial. We encourage calculated risk taking. It is alright to fail but we should learn from our mistakes.
- We will never bet the company on any project or acquisition.

The Company's risk management framework is described below.

ii. Risk Management Framework

The Company's Enterprise Risk Management Framework ("ERM") has been designed to:

- Provide management and the Board of Directors with reasonable assurance that the organisation's business objectives will be achieved by aligning risk appetite and strategy, proactively responding to risks, reducing the number of operational incidents and losses, and identifying and managing cross-enterprise risks.
- Facilitate deployment of capital.
- Ensure appropriate corporate governance practices are in place and successfully respond to a changing business environment.
- Assist management in implementing a sound and risk-based internal control system and provide the risk reporting tools to be used to identify significant control lapses/weaknesses and monitor corrective action.
- Guide staff in understanding the risk assessment methodology and strengthen their risk awareness and capability to identify, manage and control business risks.
- Assist the internal audit function in implementing a risk-based audit process for their independent review of the Company's processes.

The key elements of the ERM are:

- **Identification:** Risk events, risks and relevant controls are identified, classified and recorded in the Company's risk register.
- **Monitoring:** Risks are assessed and controls are evaluated. On a quarterly basis the Risk Register is reviewed for any changes in the risk assessment (both inherent and residual).
- **Management:** The information resulting from risk identification and measurement is used to improve how the business is managed. For example, key risk indicators (KRIs) are monitored quarterly to provide early warning of any changes in the entities risk profile.

The key categories of risk facing the Company include: insurance, market, credit, liquidity and operational risks.

The Company's strategy for managing its risks includes:

- Identifying and analysing risk through a disciplined risk management process;
- Mitigating, transferring or avoiding risks that do not fit our business objectives; and
- Retaining risk within an agreed risk appetite with appropriate levels of capital.

Risk appetite

The Board sets the Company's risk appetite at an overall level and each of the key categories of risk.

As the strategy and associated strategic objectives evolve, risk appetite is re-evaluated and updated as appropriate. Should a material change to the risk appetite be required outside of the normal annual review process, an evaluation of proposed changes is presented to senior management and then to the Risk Management Committee and the Board for approval.

Risk appetite for each of the key risks, being insurance risk, market risk, liquidity risk, credit risk, operational risk, reinsurance risk and strategic risk, is aligned with the Company's overall risk appetite. Risk appetite statements for each key risk are detailed in the Company's ORSA 2017 document (page 12) submitted to the CAA in December 2017.

Business decisions are made based on the impact of a decision on the overall risk appetite. Committee reporting at all levels is aligned to risk appetite measures.

The Board receives a quarterly update on performance against the risk appetites. Regular management team meetings and committee meetings taken place that monitor limits and implement remedial actions as required.

iii. Risk Management processes

This section summarises the Company's processes and tools to identify, measure, monitor, manage and report the risks to which the Company is exposed.

Risk identification

The following tools and processes are used in the risk identification process:

- **Risk Register:** The Chief Risk Officer maintains a Risk Register which ensures all risks and controls are recorded and categorised.
- **Monitoring of risk events:** All employees are required to report all actual and near-miss risk events to the Chief Risk Officer.
- **Emerging risk analysis:** The Board and senior management periodically review the potential for risks not yet on the register to adversely impact the Company. These risks are reviewed and monitored in the business, and then added to the Risk Register if material enough.

Risk measurement

The following tools and processes are used to quantify the risks faced by the Company:

- **Stress testing:** The Company performs stress testing as part of its ORSA process, and reports the results to the Risk Committee.
- **Qualitative assessments:** where identified risks are not quantifiable, a view on the likely materiality and nature of such risks is undertaken by the Chief Risk Officer. These risks are reported to the Risk Committee in the same way as quantifiable risks.

Risk management, monitoring and reporting

One of the key objectives of the RMF is to provide senior management and the Board with relevant risk information. The following processes and tools are in place to ensure risks are effectively monitored and escalated:

- **Risk policies:** The Company has developed policies for each of the key risk categories which set out the roles of each committee and the process to be followed to monitor and report risks.
- **Oversight by the Risk, Investment & Foreign Exchange, Reserving and Underwriting committees:** These Board-level committees, which meet quarterly, receive periodic updates from the Chief Risk Officer to ensure that risks are effectively monitored and reported.
- **Chief Risk Officer updates to Board:** A quarterly update from the Company's Chief Risk Officer is provided which sets out the key changes to the Company's key risk indicators ("KRIs") and a summary of the key risk activities since the last update.

iv. Own Risk and Solvency Assessment ("ORSA")

The ORSA is defined as the series of processes used to:

- Identify and assess the risks to which Colonnade is or could be exposed to in the short and long term.

- Determine the own funds necessary to ensure that overall solvency needs are met at all times.

The ORSA process undertaken by the Colonnade's Board of Directors (the "Board") and management involved:

- Establishing an appropriate risk management framework;
- Establishing the business strategy;
- Determining the maximum level of risk that Colonnade is willing to tolerate in pursuit of its business strategy;
- Comparing these risk tolerances for individual risks to the risk appetite, and establishing the risk management policies and procedures to manage such risks;
- Identifying risks that may prevent Colonnade from achieving its strategic objectives;
- Performing a forward-looking assessment of solvency needs with a medium or long-term perspective; and
- Stress testing the Company's capital levels for key risks over the business planning period.

A report was prepared which summarised the outputs of the ORSA process and which covered the three-year period to 31 December 2020.

v. Summary and Effectiveness of the Risk Management Process

On a quarterly basis, the Risk Management Committee and Board of Directors will monitor the business against the various tolerances and appetites as set out in the Enterprise Risk Management Framework and as agreed by the Board of Directors. This is a key part of the ongoing management of the company that contributes to an effective ORSA process.

Accountability for risk management responsibilities is set forth in the Company's ERM framework and risk management policies. The governance hierarchy of risk management is illustrated in the chart set out in section B.1.ii ("Management and Governance Structure").

This structure leads to an effective Risk Management structure as:

- Sufficient oversight is provided to the Board of Directors.
- The assessment of the effectiveness of controls is documented in the risk register and approved by the Board.
- The Luxembourg based management team have sufficient oversight around the management of risk in the company and risks which must be managed holistically.
- Sufficient ownership and accountability is delegated to the branches where many of the day to day risks are taken.

Risk management is implemented through the branches via a number of ways:

- General Managers are responsible for embedding good risk management practices in their branches.
- All employees are required to practice risk awareness and risk management as part of the working culture of the Company.
- Each branch has a Risk Manager who oversees risk management at a branch level. This is overseen by the Chief Risk Officer.

All of the above considered, the implementation of Risk Management is expected to be an ongoing process that will continue into 2018, especially for the newly created branches housing the ex-AIG businesses.

B.4 Internal control system

i. Overview

The Company's internal controls framework is made up of:

- The control environment - the culture and organisational structures that support sound internal control;
- Risk assessment – to determine controls that should be implemented to manage identified risks to within tolerance levels;
- Control activities – the elements of effective control design and operation;
- Information and communication – reporting lines to report achievement of goals and adverse reporting to the Board and its sub-committees; and
- Monitoring and oversight - supporting the oversight and governance of internal control.

In order to ensure the ongoing effectiveness and efficiency of the control framework, the Company operates a “**three lines of defence model**”. Each of these three “lines” plays a distinct role within the Company's wider governance framework, as described overleaf.

- Controls are the responsibility of the business and relevant line management, i.e. the ‘**first line of defence**’. As the first line of defence, line management is responsible for monitoring day to day adherence to this framework within its area of jurisdiction. There is close interaction between management based in Luxembourg and those located in the Company's branch offices.
- Assurance, or the ‘**second line of defence**’, is provided by employees who are independent from business line management. Assurance functions include Risk Management and Compliance. Second line of defence assurance functions monitor compliance to the control framework. Breaches are reported to the Board and the Risk Committee on an exceptions-basis as appropriate.
- The ‘**third line of defence**’ is provided by Internal Audit and the Audit Committee. Independent non-executive directors comprise the majority of the Audit Committee. The inaugural Audit Committee meeting was held in September 2017 which was complemented by a further meeting in December 2017. Both the Chief Financial Officer and Internal Auditor presented reports to the Audit Committee. In addition, the proposed external audit process for the year ended 31 December 2017 was also considered by the Audit Committee.

Ultimate responsibility for implementing and monitoring the Internal Control Framework resides with the Board. The Internal Control Framework is reviewed and approved by management and the Board on an annual basis.

B.5 Compliance

The Company's Head of Compliance has overall responsibility for overseeing compliance related activities across the Company and reports directly to the Board on compliance related matters and activities of relevance to the Company.

In executing the Company's risk-based compliance monitoring programme, the Head of Compliance works closely with local branch compliance officers appointed by the branch managers. The branch compliance officers are responsible for carrying out compliance monitoring activities within their respective branch. They are also responsible for ensuring their branch complies with applicable local

legal and regulatory requirements. Each branch compliance officer reports directly to their branch manager and the head of compliance in respect of their duties.

B.6 Internal audit function

The Company's Internal Auditor is based in its head office in Luxembourg, with a remit extending to the Company's branch operations. The Internal Auditor is responsible for evaluating the effectiveness and adequacy of the internal control system and other areas of governance within the Company.

Internal Audit activity is driven by a three year Internal Audit planning cycle which covers all areas of the Company's activities. A "rolling" three year Internal Audit plan, together with the proposed internal audit activities for the coming year, is approved by the Board annually. This utilises a risk based approach to ensure that the internal audit plan provides adequate coverage of business activities with a particular focus on the higher risk areas of the business and taking into account the specificities of the Company.

The Internal Auditor is supported, as required, by **ffh** Management Services (based in Dublin). **ffh** Management Services, a Fairfax subsidiary, has extensive internal audit experience and provides internal audit services to a number of Fairfax subsidiaries.

The Internal Auditor does not assume any other key functions within the Company.

B.7 Actuarial function

The Company's Luxembourg based Chief Actuary is responsible for setting the Company's technical provisions, which are developed in accordance with Fairfax Group reserving policies and local requirements (including Solvency II). The Chief Actuary is also a member of the Company's Reserving Committee and Underwriting Committee. Additionally, amongst other duties, the Chief Actuary is responsible for preparing an opinion on the Company's underwriting policy and the adequacy of the reinsurance arrangements in place as well as contributing to the effective implementation of the risk management system.

In discharging these duties, the Chief Actuary works closely with actuarial resources located in the Company's branches as well as other business functions; namely Underwriting, Finance, Risk Management, Claims and Operations.

B.8 Outsourcing

The Board of Directors are responsible for all of Colonnade's activities, irrespective of whether the function is outsourced or not.

Intra company outsourcing arrangements are subject to the same level of diligence and monitoring as third-party service providers. Terms are negotiated on an arm's length basis.

A Fairfax group company, **ffh** Management Services, located in Ireland, provides IT Administration & Support services, including Business Continuity Management, to the Company and provides financial reporting, risk management (supporting the CRO in Luxembourg) and internal audit (supporting the Internal Auditor in Luxembourg) support as may be required.

At year end December 2017, the Company was solely invested in cash. However, any investment portfolio that the Company may hold in future periods will be managed by Hamblin Watsa Investment Counsel Ltd, a wholly owned subsidiary of Fairfax.

Furthermore, Fairfax's head office (in Toronto) provides legal, tax and tax planning, actuarial (as may be required) support to the Company.

Responsibility for overseeing each of the outsourced activities is assigned to an individual within the Company who has the requisite knowledge and experience.

The Company's outsourcing policy is reviewed and approved by both management and the Board each year and more frequently, if required.

B.9 Other information

All relevant information regarding the Company's governance and control structures is considered to be included in sections B1-B7 above.

C. Risk profile

Given the nature of TIG Bermuda (as described in section A.1), the risk profile described within section C (other than market, credit and liquidity) relates to that of Colonnade Insurance S.A. (the “Company”).

The Company’s activities expose it to a number of key risks which have the potential to affect its ability to achieve its business objectives. The main risks facing the Company’s business include insurance (underwriting and reserving), market, credit, liquidity and operational risks. The Company’s approach to managing these risks is as follows:

C.1 Insurance risk

i. Underwriting risk

Underwriting risk includes both the risk of inappropriate underwriting and inadequate pricing.

The insurance risk management policy covers the underwriting, claims and actuarial department and addresses risks such as inappropriate or unauthorised underwriting and pricing and inadequate controls around recording and reporting of underwriting results and exposures. Metrics have been developed for the ongoing monitoring of insurance risks.

Control structures are in place to mitigate the risk of accumulations of loss from catastrophic events and the Company is further protected by the reinsurance programme comprising a range of quota share and excess of loss contracts that cover the different lines of business written by the Company (for example, the Company’s net exposure to a natural catastrophe event is limited to EUR 2 million).

ii. Reserving risk

This is the risk that unpaid loss reserves prove to be inadequate. The Company has recorded gross reserves for unpaid losses of EUR 32.0 million (which are in addition to a gross unearned premium reserve amounting to EUR 54.2 million) in the Luxembourg GAAP financial statements at 31 December 2017.

Colonnade has an Actuarial Function, to assess reserving levels, working in close cooperation with underwriting and claims staff within each of the branches. Oversight and reserve setting and compliance with the reserving policy (as established by the Board of Colonnade) are the responsibility of the Reserving Committee which meets at least three times per year. Fairfax’s actuarial team will also periodically review final reserve selections as part of the independent peer review process.

C.2 Market risk

At 31 December 2017, the Group’s investment portfolio was comprised of cash (EUR 80.3 million, of which EUR 80.2 million was held by the Company) and a US treasury bill, held by TIG Bermuda Ltd, amounting EUR 0.8 million and that matured on March 15th 2018. Therefore, the Group’s market risk exposure is not significant (and predominately results from currency risk exposure given that the Company undertakes business in multiple currencies).

The market risk management policy covers interest rate risk, currency exchange rate risk, commodity price risk and equity price risk. The Company has established limits for each asset class and for net unhedged foreign currency exposure. Key risk indicators such as interest rates and current price / earnings ratio of the equity portfolio compared to historical averages, will be monitored to assess the appropriateness and riskiness of market exposures.

The Investment and Foreign Exchange Committee reviews and oversees currency risk. The net exposure to currencies is measured in the KRIs and reported regularly to the Risk Management Committee. For a net unhedged currency exposure, the tolerance is up to 20% of balance sheet liabilities and up to 50% of SCR to be held in non-EUR currencies.

C.3 Credit risk

This is the risk that one party to a financial arrangement will fail to discharge an obligation and cause the other party to incur a financial loss. The main sources of credit risk relate to:

- **Reinsurers:** through the failure to pay valid claims against a reinsurance contract held by the Company.
- **Premium debtors:** where a broker, intermediary or policyholder fails to pass on premiums or claims collected or paid on behalf of the Company.
- **Investments:** through the issuer default of all or part of the value of a financial instrument or the market value of that instrument.

Reinsurance credit risk

Credit risk from reinsurers is controlled through only transacting with reinsurers that meet certain minimum requirements and that have been approved by the Fairfax Reinsurance Security Committee in advance.

At 31 December 2017, the Company's largest balance sheet exposure to reinsurers is with Polish Re, another wholly owned subsidiary of Fairfax, A- rated by AM Best, and who provide a quota share on the Part VII transfer from QBE, was EUR 18.1 million.

Premium debtors credit risk

The Company's premium debtors arising from direct insurance and reinsurance operations are EUR 25.3 million and EUR 14.6 million respectively as at 31 December 2017. Debtors are valued at the lower of their nominal or estimated realisable value. The credit risk associated with these receivables is considered low.

Investment credit risk

Credit risk relating to financial investments and cash and cash equivalents is monitored by the Investment & Foreign Exchange Committee, which is responsible for the management of investment credit risk.

At 31 December 2017, the Company has an exposure to credit risk in relation to cash held with credit institutions (EUR 80.2 million). Cash is placed, in accordance with established policy, with credit institutions having a rating of at least A-, except for immaterial exposures approved by the Risk Management Committee.

C.4 Liquidity risk

This is the risk the Company, though solvent, may encounter difficulty in meeting obligations associated with financial liabilities as they fall due.

The Group monitors the levels of cash and investments to ensure liquidity requirements are addressed. The Company's exposure to liquidity risk is considered low, given the significant cash balances held at 31 December 2017 (EUR 80.2 million) and throughout the reporting period.

The Expected Profit in Future Premiums (EPIFP) is the profit relating to existing contracts with premium due in the future but not yet received at the valuation date. The EPIFP amounts to EUR 8.2 million at 31 December 2017.

C.5 Operational risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people, and systems, or from external events.

Managing day-to-day operational risk is the responsibility of the line managers, both within Luxembourg and the branch offices. This includes responsibility for managing claims risks through policies and procedures including defining authority levels, protocols for management oversight, an automated system to support and report on major claims activity and a formal review process for major claims. The Company's investment managers are responsible for establishing processes and controls to ensure an effective risk management framework with regard to investments. Operational risks through exposures to key counterparties like banks are managed by the Luxembourg management team whereas risks arising from relationships with brokers and other local counterparties are the responsibility of local branch managers.

C.6 Other Material Risks and Stress and Scenario testing

As at 31 December 2016, the execution risk associated with the acquisition of the renewal rights to the AIG businesses (as described in section A.1) was significant. However, an extensive programme of work was undertaken, which commenced in 2016 and continued into 2017, to ensure the Company's readiness to on-board the AIG business, employees and assets by the transaction closing date in each of the relevant countries. This process was successfully concluded in each territory over the course of 2017.

Stress and Scenario testing

As part of the ORSA process, stress and scenario testing was undertaken to ensure the key risks identified were modelled to assess their impact on the SCR, income statement and resulting solvency ratio. This considered events considerably more severe than the Company's experience to date. The results of the testing are summarised in the annual ORSA report reviewed by the Board and submitted to the CAA. The latest exercise confirms that the Company has sufficient capital and liquidity to absorb the losses under each scenario considered and remain viable.

C.7 Other information

The implementation of risk management on a day-to-day in the business is an ongoing process that will continue into 2018, especially for the acquired AIG business operations.

D. Valuation for solvency purposes

Under Luxembourg law, the Company is exempt from the requirement of producing group consolidated financial statements. The Company prepares its non-consolidated financial statements on a going concern basis and in accordance with Luxembourg GAAP ("Lux GAAP").

At 31 December 2017, the Company's Lux GAAP financial statements recorded shareholder's equity amounting to EUR 57.3 million. This consists of EUR 9.5 million of subscribed capital (of which EUR 7 million was unpaid), a share premium account of EUR 73.9 million, a legal reserve of EUR 0.95 million and retained losses of EUR 27 million.

The Group's Solvency II balance sheet, own funds and SCR are prepared using an accounting consolidated-based approach.

The table below summarises the Group's balance sheet under Lux GAAP and Solvency II bases:

Balance sheet as at 31 December 2017 (EUR'000)	Lux GAAP	Solvency II	Difference
Assets			
Subscribed, uncalled and unpaid capital	7,000.0	-	(7,000.0)
Deferred acquisition costs	13,009.1	-	(13,009.1)
Intangible assets	5,662.9	-	(5,662.9)
Deferred tax assets	-	2,381.6	2,381.6
Holdings in related undertakings, including participations	-	-	-
Reinsurance recoverables	34,090.1	(6,327.4)	(40,417.5)
Insurance and intermediaries receivables	39,898.5	-	(39,898.5)
Cash and cash equivalents	80,283.4	80,283.4	-
Bonds	830.7	830.7	-
Other assets, not elsewhere shown	5,717.2	5,717.2	-
Total Assets	186,491.9	82,885.5	(103,606.4)
Liabilities			
Technical Provisions	86,215.6	13,250.2	(72,965.4)
Insurance & intermediaries payables	9,046.7	-	(9,046.7)
Reinsurance payables	19,611.1	-	(19,611.1)
Deferred tax liabilities	-	-	-
Payables (trade, not insurance)	14,358.4	14,358.4	-
Total Liabilities	129,231.8	27,608.6	(101,623.2)
Excess of assets over liabilities	57,260.1	55,276.9	(1,983.2)

The difference between the the shareholder equity in the Lux GAAP financial statements (EUR 57.3 million) and the excess of assets over liabilities on the Solvency II balance sheet (EUR 55.3 million) amounts to EUR 2.0 million and results from the differing valuation / balance sheet treatment of certain assets and liabilities, such as technical provisions, under Lux GAAP and Solvency II. These are described below.

D.1 Assets

The differences in valuation between Lux GAAP and Solvency II are discussed below.

i. Subscribed, uncalled and unpaid share capital

Subscribed, uncalled and unpaid share capital is shown as an asset and included within shareholder's funds on the Lux GAAP balance sheet.

Under Solvency II rules, uncalled and unpaid share capital is considered "ancillary own funds" (an off balance sheet item) and, subject to the approval of the regulator, may be used to meet a company's solvency capital requirement (subject to certain limits). The CAA has given its approval to the Company for its use of the EUR 7 million subscribed, uncalled and unpaid share capital as Tier 2 ancillary own funds.

ii. Investment in affiliated undertakings and participating interests (EUR 1 million)

In its non-consolidated Lux GAAP financial statements, the Company has recorded an investment in TIG Bermuda as a separate asset to the value of EUR 1 million on the balance sheet. In contrast, the underlying assets and liabilities on the TIG Bermuda balance sheet (which net to approximately EUR 1 million) are included on the consolidated Group Solvency II balance sheet.

iii. Deferred Acquisition Costs

Deferred Acquisition Costs on the Lux GAAP balance sheet are recognised under Solvency II rules, in line with the recognition of the best-estimate cashflows associated with the gross Unearned Premium reserve.

iv. Intangible assets

In accordance with Solvency II requirements, intangible assets recognised in the Lux GAAP financial statements (being policy data rights; software; and concessions, patents, licences and trademarks) have been ascribed a nil value.

v. Deferred Tax Assets

The Solvency II balance sheet includes a deferred tax asset of EUR 2.4 million, which largely results from trading losses incurred at the level of the Company's branches, which is not recognised under Lux GAAP.

vi. Reinsurance recoverables

The reinsurance recoverables have been determined on a best estimate basis and consider those associated with the premium provision and claims provision, in line with the Solvency II rules.

vii. Insurance and intermediaries recoverables

Consistent with the Solvency II regulations, the technical provisions include claims expenses and premium cash flows. Therefore, insurance and intermediary recoverables are incorporated within the Solvency II technical provisions whereas they are shown separately on the Lux GAAP balance sheet.

D.2 Technical provisions

i. Solvency II Technical Provisions as at 31 December 2017

A breakdown of the Group Solvency II technical provisions as at 31 December 2017 is provided below (amounts in EUR'000):

EUR'000	Best Estimate	Risk Margin	Total
Gross	8,220	5,031	13,250
Reinsurers' share	6,327	0	6,327
Net	14,547	5,031	19,578

The reinsurer's share results in an increase in technical provisions as cashflows out (e.g. premiums ceded but not yet paid) are expected to exceed recoveries from reinsurers.

Details of the net technical provisions by Solvency II LoB as at 31 December 2017 are as follows (amounts in EUR'000s):

Solvency II LoB	Net Best Estimate	Risk Margin	Total
Medical Expense Insurance	1,173	406	1,579
Other Motor Insurance	1,989	688	2,677
Marine, Aviation and Transport Insurance	1,239	428	1,667
Fire and Other Damage to Property Insurance	4,533	1,568	6,100
General Liability Insurance	5,351	1,851	7,202
Credit and Suretyship Insurance	185	64	249
Miscellaneous Financial Loss	77	27	103
Total	14,547	5,031	19,578

An analysis of the difference between the technical provisions on a Lux GAAP and Solvency II basis by Solvency II Line of Business as at 31 December 2017 is shown below (amounts in EUR'000s):

Solvency II LoB	Lux GAAP Net Insurance Liabilities	Reclassification Adjustments	Solvency II Basis Change	Solvency II TPs
Medical Expense Insurance	8,793	-3,790	-3,424	1,579
Other Motor Insurance	16,610	-10,083	-3,850	2,677
Marine, Aviation and Transport Insurance	2,183	-731	216	1,667
Fire and Other Damage to Property Insurance	15,146	-9,419	373	6,100
General Liability Insurance	14,561	-5,963	-1,396	7,202
Credit and Suretyship Insurance	121	190	-62	249
Miscellaneous Financial Loss	3,758	-3,499	-155	103
Total	61,172	-33,297	-8,298	19,578

The 'Net Insurance Liabilities' include earned reserves and UPR net of reinsurance and commissions.

The reclassification adjustments reflect where cash flows in (such as insurance balances receivable) are offset against cash flows out (such as future claims payments) in the Solvency II balance sheet and do not result in a difference in the valuation of balance sheet equity. The differences in basis that impacts the equity are discussed further below (see sub-section vii).

ii. Reserving Process and Governance

The Company's reserving process to determine the technical provisions on GAAP and Solvency II bases broadly comprises the following steps, as part of a robust and rigorous process for setting reserves:

- Determination and recommendation of ultimate claims by the Actuarial Function;
- Review/validation by the branches;
- Determination of the technical provisions to adopt in the GAAP/Solvency II technical provisions; and
- Review and approval by the Reserving Committee / Board.

iii. Key methodology and assumptions used to determine ultimate premiums and claims

To determine the estimate for ultimate premiums and claims, analysis is undertaken separately for each line of business.

For the majority of the classes of business, the following standard actuarial projection techniques are used to calculate ultimate premiums and claims:

- Basic Chain Ladder (based on paid and incurred claims)
- Bornhuetter-Ferguson (based on paid and incurred claims)
- Initial Expected Loss Ratio

Claim experience on the most recent years of account is relatively immature. As a result, the Basic Chain Ladder methods produce estimates with a relatively higher level of uncertainty. When projecting estimates for these years of account, the Bornhuetter-Ferguson and Initial Expected Loss Ratio methods are used instead.

Specific adjustments may be made to projected ultimate claims at either a class or an individual claim level. This may be due to a known large loss and/or loss experience on a particular contract.

When choosing between methods, the maturity of each year of account, volume of data, benchmark information and other business-specific issues that are known about at the time of valuation are taken into account.

iv. Key methodologies and assumptions used to determine best estimate technical provisions on a GAAP and Solvency II basis

Having determined the ultimate premiums and claims to form the basis for the technical provisions, a number of additional material assumptions are required to determine the technical provisions on a GAAP and Solvency II basis:

- **Writing and earnings patterns** – used to determine the level of earned and unearned premiums. These are based on the inception and expiry dates of the underlying contracts.

- **Expense provisions** – an Unallocated Loss Adjustment Expenses (ULAE) provision is held within the GAAP technical provisions. In addition, expense provisions are required within the Solvency II technical provisions in respect of premiums, claims and investments which represent the on-going servicing of the business included in the valuation.
- **Payment patterns** – used to determine the cash flow profiles. When calculating technical provisions to demonstrate solvency on a Solvency II basis, the time-value of money must be allowed for. This requires the estimation of timing and quantum of future cash flows associated with the technical provisions. These cash flows are then discounted back to present value using risk-free yield curves.
- **Risk free yield curves** – by currency and based on those set by EIOPA.

A Risk Margin, being the expected cost of capital to support the run-off of the technical provisions, is also added and is calculated based on the standard formula and discounted using a yield of 6% as set by EIOPA.

v. Reserve Uncertainty

The key uncertainties surrounding the technical provisions relate to the ultimate unpaid claims reserves. These uncertainties are present on both a financial accounting and Solvency II basis. However, in determining the ultimate unpaid claims reserves, it was established that the Company was not exposed to any individual or aggregation of large losses which increased the uncertainty of the Company's reserves beyond the normal range of uncertainty for insurance liabilities at this stage of development.

vi. Impact of Reinsurance

The impact of reinsurance on the Solvency II technical provisions is quantified above. This includes the impact of the Part VII transfer which is ceded 100% to Polish Re, another wholly owned Fairfax subsidiary.

vii. Material differences between technical provisions on GAAP and Solvency II bases

The key differences between the GAAP and Solvency II technical provisions are:

- **Profit on Unearned Premiums** – the UPR is based on 100% of unearned premium on a GAAP basis, whereas under Solvency II, profit relating to the unearned premium is recognised at the relevant expected loss ratio plus an allowance for expenses.
- **Additional Solvency II loads** - in addition to the Unallocated Loss Adjustment Expenses (ULAE) and bad debt held on a GAAP basis, provisions are required in respect of premiums, claims and investment expenses.
- **Discounting** - the impact of discounting using yield curves provided by EIOPA as at 31 December 2017.
- **Risk Margin** – the load required for the Risk Margin as at 31 December 2017.

In valuing the Solvency II technical provisions:

- There are no matching adjustments applied.
- There are no volatility adjustments used.
- There are no transitional risk-free interest term structures applied.
- There are no transitional deductions applied.

viii. Future management actions

Future reinsurance, which will generally not yet have been purchased as at the valuation date (e.g. renewal of existing programmes on expiry), may partially cover business included in the technical provisions (e.g. bound but not incepted business). It is assumed that this reinsurance will be purchased in line with business plan/latest forecast assumptions – this is a key 'future management action' assumption.

D.3 Other liabilities

For all liabilities other than the technical provisions, there are no valuation differences between the GAAP and Solvency II bases.

D.4 Alternative methods for valuation

There are no alternative valuation methods to disclose.

D.5 Other information

All relevant information regarding the Company's valuation methodologies is considered to be included in sections D1-D4 above.

E. Capital management

E.1 Own funds

i. Policy

The Company's capital policy sets out capital requirements and principles of funding and states the importance of ensuring that both the Group and Company are sufficiently capitalised at all times and complies with the Solvency II requirements. Responsibility for ensuring compliance with this policy rests with the Board of the Company.

ii. Capital requirements

With effect from 1 January 2016, the regulatory and solvency requirements for most insurers and reinsurers underwent a major change with the introduction of Solvency II, which provides for the valuation of both assets and liabilities on a market consistent basis.

The Solvency Capital Requirement ("SCR") is the amount of capital required to ensure continued solvency over a one year time frame with a probability of 99.5%. The Company calculates its SCR using the standard formula specified in detail in the Solvency II legislation.

The absolute minimum level of capital required under Solvency II is the Minimum Capital Requirement (MCR). This amount is lower than the SCR and defines the point of intensive regulatory intervention.

Under Solvency II, capital is referred to as Own Funds and a distinction is made between Basic Own Funds (BOF) and Ancillary Own Funds (AOF). Capital starts with the excess of assets over liabilities on the Solvency II balance sheet (EUR 55.3 million at year end 2017) to which qualifying subordinated debt are added (the Company has no subordinated debt) to arrive at Basic Own Funds. Off balance sheet items that may absorb losses are known as Ancillary Own Funds (the Company has EUR 7 million of unpaid, uncalled share capital which is classified as Ancillary Own Funds).

The Own Funds are classified into tiers of Own Funds and restrictions are applied to limit the extent to which the components of Own Funds can be used to meet the capital requirements (SCR and MCR).

iii. Reconciliation of Lux GAAP Net Equity to Solvency II Own Funds

The following table compares shareholders' equity as set out in the Company's Lux GAAP financial statements to the Solvency II Available Own Funds at 31 December 2017.

	EUR'000
Lux GAAP shareholders' equity	57,260
Intangibles	(5,663)
Net Deferred Tax Asset	2,382
Revaluation of Non-Life reserves	8,298
Solvency II Available Own Funds	62,277

The composition of the Company's Solvency II Available Own Funds at 31 December 2017 is set out in the following section.

iv. Own Funds structure as at 31 December 2017

The composition and total available own funds for the Group at 31 December 2017 is set out below. Whilst Basic Own Funds may fall within one of three tiers, Ancillary Own Funds are only permitted to form part of Tier 2 or 3 reflecting the fact they are not on the balance sheet.

EUR'000	Tier 1 Unrestricted BOF	Tier 2 Ancillary	Tier 3 BOF	Total
Paid up share capital	2,500			2,500
Uncalled and unpaid share capital		7,000		7,000
Share Premium	73,876			73,876
Net Deferred Tax Asset			2,382	2,382
Reconciliation reserve	(23,481)			(23,481)
Total Own Funds	52,895	7,000	2,382	62,277

The Company's paid up share capital, share premium and legal reserve have each been classified as Tier 1 capital. The reconciliation reserve is also classified as Tier 1 capital in accordance with the Solvency II guidelines.

The Group has also accounted for EUR 7 million of unpaid share capital in its eligible own funds at 31 December 2017. Under Solvency II rules, unpaid share capital is considered "ancillary own funds" and is eligible (subject to certain limits) given the approval of the regulator. The CAA has given its approval to the Company for its use of the EUR 7 million of unpaid share capital as ancillary own funds. The unpaid share capital is classified as a Tier 2 ancillary own funds item and is eligible to cover the Company's SCR, but not MCR, at 31 December 2017.

The reconciliation reserve has been calculated as follows:

Reconciliation reserve	EUR'000
Excess of assets over liabilities	55,277
Less:	
Paid up Ordinary Share Capital	(2,500)
Share Premium	(73,876)
Net Deferred Tax Assets	(2,382)
Reconciliation Reserve	(23,481)

v. Eligible Own Funds at 31 December 2017

The classification into tiers is relevant to the determination of eligible own funds – being the own funds that are eligible to cover the MCR and SCR.

The MCR may only be covered by Tier 1 and Tier 2 basic own funds (Tier 2 ancillary own funds and Tier 3 basic own funds are not eligible to cover the MCR).

The table below shows the amount of eligible own funds to cover the SCR and MCR by tier:

EUR'000	Total eligible own funds	Tier 1 Unrestricted BOF	Tier 2 Ancillary	Tier 3 BOF
Total eligible own funds to meet the SCR	62,277	52,895	7,000	2,382
Total eligible own funds to meet the MCR	52,895	52,895	0	0

EUR 52.9 million (84.9%) of the company's eligible own funds are unrestricted tier 1 capital. This consists of the Company's paid up share capital, share premium, legal reserve and the reconciliation reserve.

vi. Eligible Own Funds to cover capital requirements (SCR and MCR)

The table below presents the ratio of eligible own funds that the Group holds to cover its capital requirements at 31 December 2017.

EUR'000	2017
SCR	35,528
MCR	8,888
Capital available for SCR	62,277
Capital available for MCR	52,895
Ratio SCR	175%
Ratio MCR	595%

E.2 Solvency capital requirement and Minimum capital requirement

The Group uses EIOPA's Solvency II Standard Formula to calculate its SCR. It does not use Company specific parameters and does not use simplified calculations in its computation. The table below sets out the capital requirements for each risk module of the Standard Formula.

Capital requirement for each risk module (EUR'000)	Net solvency capital requirement	TIG Bermuda	Diversification	Group
Non-life underwriting risk	21,163	0	0	21,163
Life underwriting risk	0	0	0	0
Health underwriting risk	5,805	0	0	5,805
Market risk	1,841	227	-227	1,841
Counterparty default risk	13,648	16	-16	13,648
Diversification	-10,254	-11	11	-10,254
Basic Solvency Capital Requirement	32,204	232	-232	32,204
Operational risk	3,325	0	0	3,325
Solvency Capital Requirement ("SCR")	35,528	232	-232	35,528

As at 31 December 2017, the main component of the Group's SCR is non-life underwriting risk, particularly premium risk, in expectation of the significantly increased premiums to be earned in 2018. Also included within non-life underwriting risk is a catastrophe risk charge which relates primarily to flood and earthquake exposures.

The next most significant component is counterparty default risk which includes risks associated with reinsurance, insurance balances receivable and cash at bank.

The other components of the Group's SCR as at 31 December 2017 are market risk, which is predominantly currency risk related, health underwriting risk, related to the medical expenses Solvency II line of business, and operational risk.

The Minimum Capital Requirement at 31 December 2017 is EUR 8.9 million which is the minimum calculated from the formula.

E.3 Use of the duration-based equity sub-module in the calculation of the Solvency capital requirement

As the Group does not write life insurance business, the duration-based equity risk sub-module set out in Article 304 is not relevant for the Company.

E.4 Difference between the standard formula and any internal model used

As the Group does not utilise an internal capital model, this is not relevant.

E.5 Non-compliance with the Minimum Capital requirement with the Solvency Capital requirement

There has been no non-compliance with the minimum consolidated Group SCR or SCR during the reporting period, and the Company is expected to remain compliant going forward.

E.6 Other information

The Company received a further capital injection of EUR 3 million from its parent in March 2018.

APPENDICES

The following QRTs are included as appendices:

S.02.01 - Balance Sheet

S.05.01 - Premiums, claims and expenses by line of business

S.05.02 - Premiums, claims and expenses by Country

S.23.01 - Own Funds

S.25.01 - Solvency Capital Requirement – for undertakings on Standard Formula

S.32.01 - Undertakings in the scope of the group

S.02.01 - Balance Sheet

As at 31 December 2017, amounts in €000 unless stated
